DEC 13 2006

IN THE SPECIFICATION:

Please amend paragraph [0022] as follows:

[0022] In accordance with the present invention, sear 46 is equipped with a single action let-off pin 56, and hammer 20 is equipped with a double action let-off pin 58. ~~These are so disposed and arranged to cooperate with a notch 60 and a second finger 62, respectively on the transfer bar 26 (see Fig. 2a).~~ As shown in Fig. 2a, single action let-off pin 58 extends over the transfer bar 26 between first and second fingers 30 and 62 respectively, and double action let-off pin extends over the transfer bar 26 in alignment with notch 26.

Please amend paragraph [0026] as follows:

[0026] Referring to Fig. 5 of the drawing, trigger 24 has been drawn to a 40° rotation position to further rotate the hammer to a 35° position against spring 40. Cam surface 28 continues to cause the transfer bar 26 to move in a downward direction against transfer spring 32. This moves notch 60 in a direction away from the double action let-off pin 58.
